

Candle Safety

Candles may be pretty to look at but they are a cause of home fires — and home fire deaths. Remember, a candle is an open flame, which means that it can easily ignite anything that can burn.

"CANDLE WITH CARE"

- Blow out all candles when you leave the room or go to bed. Avoid the use of candles in the bedroom and other areas where people may fall asleep.
- Keep candles at least 1 foot (30 centimetres) away from anything that can burn.

Think about using flameless candles in your home. They look and smell like real candles.

IF YOU DO BURN CANDLES, make sure that you...

- Use candle holders that are sturdy, and won't tip over easily.
- Put candle holders on a sturdy, uncluttered surface.
- Light candles carefully. Keep your hair and any loose clothing away from the flame.
- Don't burn a candle all the way down — put it out before it gets too close to the holder or container.
- Never use a candle if oxygen is used in the home.
- Have flashlights and battery-powered lighting ready to use during a power outage.

Candles and Kids

Never leave a child alone in a room with a burning candle. Keep matches and lighters up high and out of children's reach, in a locked cabinet.

FACTS

- ! **December** is the peak month for home candle fires.
- ! More than **one-third** of home candle fires started in the bedroom.
- ! **Three of every five** candle fires start when things that can burn are too close to the candle.

Additional requirements for candle safety

Warning: candles get hot during use.

Keep candles (as well as matches and lighters) out of reach of children and pets.

Always burn candles within sight. Never leave a burning candle unattended. Do not use a candle as a nightlight. Always extinguish any lit candles before going to sleep.

Place each candle in a suitable candle holder which is designed for burning candles – *not just “decorative”* – on a stable, heat-resistant surface that is stable and large enough to catch any melted wax.

If burning multiple candles at once, place them at least 3 inches apart from each other.

Keep lit candles away from drafts and air currents (open windows, vents, fans, and high traffic areas). This helps keep the flame burning steadily in the center of the candle.

Recommended burn time: 3-4 hours per use. This promotes an “even burn” throughout the life of the candle. Shorter can result in “tunneling” and reduced candle life; longer can be dangerous.

Trim the wick to ¼” before every burn. This helps prevent the flame from getting too large and reduces any excess soot and smoke.

Keep the wax pool free from trimmings, matches, and any other debris.

When not lit, store candles wick-end-up in a cool dry area, out of direct sunlight.

Always read and follow the manufacturers' directions for use and safety. ***Failure to follow these instructions can result in property damage, personal injury and/or death.***
